Docket No. F-8698

Ser. No. 10/550,126

AMENDMENTS TO THE CLAIMS:

Please replace the claims with the claims provided in the listing below wherein status, amendments, additions and cancellations are indicated.

1-22. (Cancelled)

23. (New) A computer-readable medium storing a browser program for performing a method comprising:

determining whether an activated operating section of a plurality of operating sections on a remote controller corresponds to a currently opened window of a plurality of windows; wherein each window of the plurality of windows respectively corresponds to an operating section of the plurality of operating sections in the remote controller, the plurality of operating sections activated selectively by input of a user, and a number of the windows being the same as a number of the operating sections; and

switching to a user requested window corresponding to the activated operating section when the activated operating section does not correspond to the currently opened window by setting the user requested window as the currently opened window, opening a markup language document corresponding to the user requested window if there is a markup language document corresponding to the user

Ser. No. 10/550,126

requested window and displaying contents of the markup language document in the user requested window if there is a markup language document corresponding to the user requested window.

24. (New) The browser program according to claim 23, wherein the markup language document has a frame structure.

25. (New) The browser program according to claim 24, further comprising the step of switching between frames when the activated operating section corresponds to the currently opened window.

26. (New) The browser program according to claim 23, further comprising the step of generating a uniform resource locator input dialog to make the user acquire a new markup language document when the activated operating section corresponds to the currently opened window.

27. (New) The browser program according to claim 23, further comprising the step of displaying a history dialog when the activated operating section corresponds to the currently opened window.

Docket No. F-8698

Ser. No. 10/550,126

28. (New) The browser program according to claim 23, further comprising the step of displaying a list of book marked uniform resource locator s when the activated operating section corresponds to the currently opened window.

29. (New) The browser program according to claim 23, wherein no markup language document is opened and displayed in the step switching when there is no markup language document corresponding to the user requested window.

30. (New) The browser program according to claim 23, further comprising opening a new markup language by a script when there is no markup language document corresponding to the user requested window.

31. (New) The browser program according to claim 23, further comprising opening a new markup language document in a window except the currently opened window when the new markup language document is opened by a script.

32. (New) The browser program according to claim 23, further comprising displaying a dialog for selecting a window to open when a new markup language document is opened by a script.

Docket No. F-8698

Ser. No. 10/550,126

33. (New) The browser program according to claim 23, further comprising opening a new markup language document in one of the windows except the currently opened window with a uniform resource locator input by the user in the currently opened window.

34. (New) The browser program according to claim 23, further comprising displaying a dialog for selecting a window to open when a new markup language document is opened with a uniform resource locator input by the user in the currently opened window.

35. (New) The browser program according to claim 23, wherein the plurality of operating sections are activated by input through hardware buttons.

36. (New) The browser program according to claim 23, wherein the plurality of operating sections are activated by input through software buttons.

37. (New) A content display apparatus comprising
means for determining whether an activated operating section of a plurality of operating sections on a remote controller corresponds to a currently opened window of a plurality of windows; wherein each window of the plurality of windows respectively corresponds to an operating section of the plurality of

Ser. No. 10/550,126

operating sections in the remote controller, the plurality of operating sections activated selectively by input of a user, and a number of the windows being the same as a number of the operating sections; and

means for switching to a user requested window corresponding to the activated operating section when the activated operating section does not correspond to the currently opened window by setting the user requested window as the currently opened window, opening a markup language document corresponding to the user requested window if there is a markup language document corresponding to the user requested window and displaying contents of the markup language document in the user requested window if there is a markup language document corresponding to the user requested window.

38. (New) The content display apparatus according to claim 37, further comprising means for switching an active state between frames when the markup language document has a frame structure and the activated operating section corresponds to the currently opened window.

39. (New) The content display apparatus according to claim 37, further comprising means for generating a uniform resource locator input dialog to make the

Docket No. F-8698

Ser. No. 10/550,126

user acquire a new markup language document when the activated operating section corresponds to the currently opened window.

40. (New) The content display apparatus according to claim 37, further comprising means for displaying a history dialog when the activated operating section corresponds to the currently opened window.

41. (New) The content display apparatus according to claim 37, further comprising means for displaying a list of book marked URLs when the activated operating section corresponds to the currently opened window.

42. (New) The content display apparatus according to claim 37, wherein the means for switching does not open and display a markup language document when there is no markup language document corresponding to the window to corresponding to the activated operating section.

43. (New) The content display apparatus according to claim 37, further comprising means for opening by a script a new markup language document in a window without a corresponding markup language document.

Docket No. F-8698

Ser. No. 10/550,126

44.(New) The content display apparatus according to claim 37, further comprising means for opening by a script a new markup language document in one of the windows except the currently opened window.

45.(New) The content display apparatus according to claim 37, further comprising means for displaying a dialog for selecting a window to open when a new markup language document is opened by a script in a markup language document.

46.(New) The content display apparatus according to claim 37, further comprising means for opening a new markup language document in a window except the currently opened window with a uniform resource locator input by the user in the currently opened window.

47.(New) The content display apparatus according to claim 37, further comprising means for displaying a dialog for selecting a window to open when a new markup language document is opened with a uniform resource locator input by the user in the currently opened window.

Docket No. F-8698

Ser. No. 10/550,126

48. (New) The browser program according to claim 23, wherein each of the operating sections on the remote controller fixedly corresponds to one of the windows such that correspondence between operating sections and the windows remains the same after the execution of the step of switching.
